

How a 140-Year-Old University Used Mindstaq to Supercharge Visibility and Improve Efficiency by 50%

Executive Summary

A 140-year-old U.S. university — with over 6,800 students and 2,000 staff — faced a challenge familiar to many large institutions: managing dozens of overlapping initiatives without losing strategic visibility. With 130+ active IT projects and ongoing non-project work, leadership needed a unified system that could cut through the noise.

Mindstaq delivered.

In just weeks, the university transitioned from fragmented tools to one seamless platform. Project and task efficiency improved by over 50%. Monthly and quarterly reporting time dropped dramatically. Executives gained real-time insight into progress, programs, and OKRs — without extra overhead.

Mindstaq didn't just streamline operations. It gave the organization the confidence to lead decisively, backed by clear data and aligned teams.

BUSINESS CHALLENGE

When Complexity Grows, Visibility Matters Even More

This private university has built a reputation on academic excellence and operational scale. But as their IT ecosystem grew, so did the number of projects — 130+ active initiatives at any time, plus a high volume of non-project tasks critical to day-to-day execution.

Their tool stack included Microsoft Project, Planner, spreadsheets, and email. While functional individually, the lack of integration created gaps across planning, tracking, and reporting

Key pain points:

- No single system to manage both project and non-project work
- Redundant effort in task coordination and updates
- Manual reporting for monthly and quarterly leadership reviews
- Limited executive visibility into workstreams and team productivity

Strategic oversight was slowed, and execution relied too heavily on tribal knowledge and manual effort. The IT team wasn't lacking talent or will — they simply lacked the infrastructure to scale efficiently.

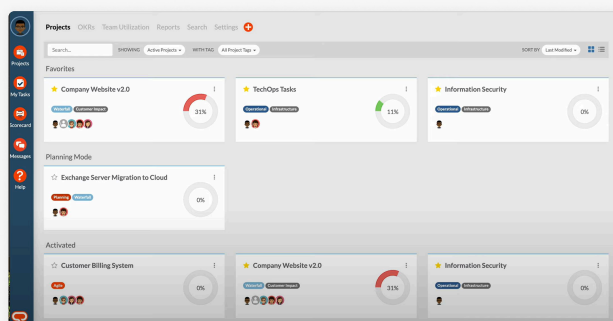

They needed a solution that could align teams, centralize insight, and eliminate operational drag.

One Platform. Total Visibility. Zero Guesswork.

The university evaluated several enterprise tools, including ServiceNow. But implementation complexity, high cost, and poor fit made those options unsustainable. When they discovered Mindstaq, they found a solution that balanced depth with usability — and delivered immediate traction.

Mindstaq was rolled out across three core areas:

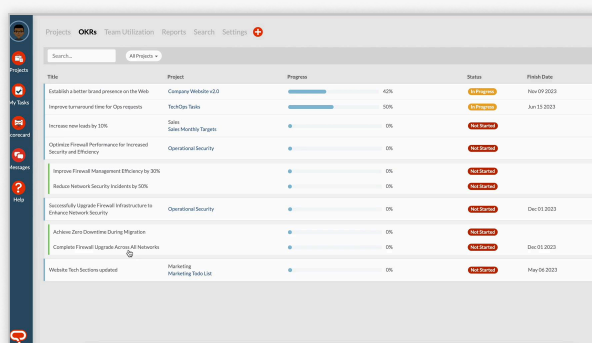

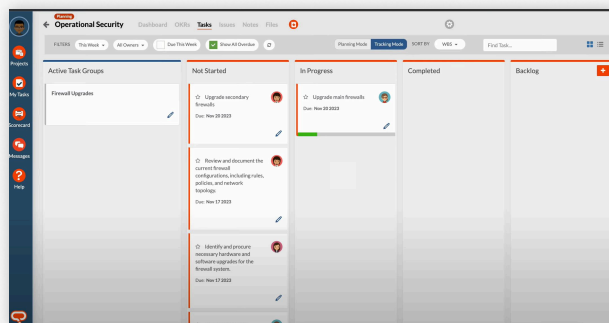

Project Management

Structured tracking of 130+ formal projects in one place, with clear ownership, deadlines, and progress views.

Task Execution

“My Work” dashboards gave team members control over both project-based and operational tasks, improving accountability and flow.

Executive Scorecards

Leadership gained real-time access to OKRs and program performance — no more waiting for manual reports.

Within the first few weeks, adoption was seamless. Project leads transitioned quickly, and teams began tracking progress more effectively without disrupting their day-to-day workflow.

Key Features Delivered:

- Unified platform for all project, program, and operational work
- Deep integration with Microsoft Teams and identity management stack
- Role-based dashboards tailored to contributors, managers, and executives
- Built-in, real-time reporting
- Clean, intuitive interface for rapid onboarding
- Flexibility to evolve with changing organizational priorities

Mindstaq didn't simply implement a new tool, it introduced a smarter rhythm of work across the entire IT function.

THE RESULTS

Fewer Tools. Faster Progress. More Confidence.

After adopting Mindstaq, the university experienced a clear shift in how work got done — and how results were measured.

QUANTIFIABLE OUTCOMES:

50+ improvement in project and task execution

Hundreds of hours saved from automated reporting

Executive dashboards reduced decision latency

Faster project delivery across departments

STRATEGIC BENEFITS:

- Teams aligned faster, worked smarter, and owned their deliverables
- Executives moved from reactive reporting to proactive management
- Reduced tool fatigue and simplified workflows across the board
- Strengthened executive confidence in long-term delivery capabilities

Want this level of strategic clarity and execution power for your organization?

Talk to Mindstaq or do-it-yourself with a free trial.
Because what gets seen, gets done.

Mindstaq has been instrumental in helping us achieve our strategic goals. Our leadership team now has real-time status visibility, enabling them to make faster, smarter decisions and manage projects to completion."

**IT Leadership, Private
U.S. University**

MindStaq is a cloud-based, artificial intelligence powered, project & productivity management platform for today's hybrid workforce providing enterprise and small & mid-size businesses (SMBs) with a comprehensive, all-in-one, intuitive work management platform.
